PROFESSIONAL SUMMARY

Senior Software Engineer with 8+ years of experience with a recent focus on Agentic AI and Generative AI systems. Led development of enterprise-grade agentic workflows delivering hallucination-free, source-aware responses using document ingestion, tool integration, and context-rich querying. Strong expertise in Java, Spring Boot, microservices, and distributed data platforms, with hands-on experience across AWS, Kubernetes, Docker, Terraform, and modern observability stacks. Proven ability to deliver production-grade APIs, data pipelines. Adept at collaborating with product managers, stakeholders, and cross-functional teams to translate complex requirements into reliable, well-architected solutions, while mentoring engineers and upholding high standards of code quality in Agile environments.

TECHNICAL SKILLS

Programming Languages/Frameworks: Java, Javascript, Python, Flask, Pandas, Django, Node, React, Typescript,

Cloud Technologies: AWS, Kubernetes, Docker, Terraform

Database: PostgreSQL, ChromaDB, MySQL, Oracle 11g, MongoDB, Snowflake

Tools: Git, REST API, Postman, Datadog, PagerDuty, Maven, Bazel, GraphQL

EXPERIENCE

C3.ai via Fractal Analytics

Senior Software Engineer

Redwood City, California

May 2024-Present

- Built Agentic AI product for enterprise platforms to deliver hallucination free and source aware responses.
- Improve agentic workflows by enabling support for context rich queries with document uploads and tools integration.
- Lead development activities to integrate AI platforms like OpenAI and Claude with C3's Generative AI capabilities for government programs.
- Deliver AI-based applications to state and local government bodies, enabling them to enhance public sector performance.
- Gained hands-on experience in using front-end technologies like Typescript along with React and Redux.
- Coordinate with PMs and stakeholders to gather requirements, define project direction, and ensure successful outcomes.

Marqeta

Software Engineer II

Oakland, California

April 2022-July 2023

- Develop **RESTful API** features in a **TDD** environment for identity verification application using **Java Spring Boot**.
- Develop and drive deployment activities of API application in the **microservice architecture** setup using **Docker and Kubernetes** in the AWS infrastructure.
- Collaborated with the Customer Success team to design and develop API specifications using **OpenAPI 3.0** for a user activity history dashboard application by pulling data from different data stores like **S3, MySQL and Snowflake**.
- Improve infrastructure management and scaling by using Infrastructure-as-Code framework and tools like **Terraform**.
- Worked on developing **data migration pipeline** using **NodeJS** to move data between different applications.
- Developed and maintained monitoring and alerting procedures using tools like **Datadog** and **PagerDuty**.
- Maintain high level of code quality within the team through code reviews and PR feedback.

State Street Corporation

Software Developer

Princeton, New Jersey

November 2017-April 2022

- Develop and maintain a configuration-based multi-tenant reporting tool using **ReactJS** and **Redux** frameworks.
- Collaborate with multiple customer-facing teams to gather and analyze requirements to design configurable solutions on UI-based reporting platform.
- Implement tools using **NodeJS** to enable integration of the reporting platform with file-based data sources like Box.
- Lead efforts of requirement gathering, solution design and POC development of API-based reporting system.
- Design and develop API-based reporting system using **Java Spring Boot** and deploy on **Microsoft Azure** infrastructure leveraging tools like **Google APIGee, Docker and Kubernetes**.

- Design and implement a highly scalable data ingestion pipeline using **Python** and **Kafka** to ingest and process incoming data from multiple customers.
- Led a small geographically dispersed team and delivered solutions by adhering to **Agile** guidelines for development.
- Leverage **GitHub** as code repository and maintain high level of code quality with frequent code reviews and PR feedback.

Certified Equity Professional Institute

Backend Developer

Santa Clara, California

June 2016-November 2017

- Architected and developed data flow design for role-based course management system for student portal.
- Designed data pipeline for **AWS S3** based data sink using **SQS** and **EC2** instances with scaling rules in place.
- **Transformed data** using **MySQL** queries and created interactive actionable **reports** using **Microsoft PowerBI**.
- Organized multiple meetings with business stakeholders to refine requirements and document knowledge on DFD's.
- Analyzed and translated data requirements into data flow designs implementing data warehousing principles.
- Implemented requirement tracking and source code management using tools like **Zendesk**, **GitBash** and **SmartGit**.
- Collaborated with the Director of the organization to gather requirements and knowledge on various business processes.
- Onboarded and lead small team of developers. Managed tasks and requirement deadlines following **Agile** guidelines.

Cassiopae Solutions Pvt Ltd.

Software Developer

Pune, India

April 2014-January 2015

- Developed modules in **Java** for the server end of a web-based application used for asset management.
- Ingest and analyze real-time semi-structured text data using **Python**. Reduced manual efforts for log analysis by 60%.
- Designed **data cleaning** and **transformation pipelines** for transactional data to be stored in SQL database.
- Worked under agile environment for rapid development and delivery of product.

InteractCRM Solutions Pvt Ltd.

Software Engineer

Mumbai, India

October 2012-April 2014

- Collaborated with the development team to upgrade the backend from relational to **NoSQL MongoDB** to improve performance by at least 25%.
- Designed and developed CRM Tool modules using **Java Hibernate**, **Websockets** and **Javascript**.
- Drive deployment activities on Linux based application servers leveraging utilities like SSH.
- Collaborated with the development team to upgrade the basic ETL framework ingesting transactional and event data of more than 10000 daily active users.

EDUCATION AND CERTIFICATIONS

Masters in Business Analytics | Trine University | Richmond, CA | Current Student

AWS Certified Solutions Architect – Associate | Amazon | Princeton, NJ | May 2020

Masters in Management Information Systems | Santa Clara University | Santa Clara, CA | June 2017

Post Graduate Diploma in Advanced Computing | CDAC | India | Aug 2012

Bachelor of Engineering in Information Technology | University of Pune | India | May 2011
